↳ Real world Based project ↳ Frontend Developer ↳ Web Developer

PROJECT

Ape's Event Website

Ape's Event is the revolutionary event management system that intends to change everything about how a user plans or organizes any event. This could be in the form of an elaborate wedding or some corporate soiree. On our platform, users can simply navigate through plenty of event options, each identified by a very colorful icon. Clicking an event takes them to a detail page listing every essential service in the form of orchestras, decorators, or caterers.

ShopCom – E-commerce Web Application

Developed a responsive e-commerce platform using Angular and integrated the FakeStore REST API for dynamic data management. Implemented core features including category-based product filtering, a real-time shopping cart with local storage persistence, and secure navigation using Angular Guards. Focused on high-performance UI/UX by leveraging Angular Material and reactive forms for seamless user interaction.Built a comprehensive product catalog with real-time search and an automated cart system for price calculations and quantity management.

RDX- Reatil Dashboard Expert(working process now)

The retail industry generates large volumes of data from sales, inventory, and customer transactions. Converting this data into meaningful insights is essential for effective decision-making. RDX – Retail Dashboard Expert is an AI-powered analytics system designed to simplify retail data analysis through a user-friendly dashboard and natural language interaction.By using python,Streamlit,LLM model.
